A SHOWCASE OF THE SECTOR'S BEST

n a year of vast reforms and financial crisis for the sector, there has been one event that has allowed us to take a breather and witness FE at its best: the Skills Show

Almost 80,000 people headed to Birmingham's NEC for the country's biggest careers event, which took place between November 16 and 18, to watch the crème de la crème of skills.

The finals of the national WorldSkills UK competitions were, as ever, the heart of the show, and broadcast the incredible talent that our colleges, independent learning providers and employers produce.

We start this special souvenir supplement with a sitdown interview with the man that makes this all happen, Dr Neil Bentley, the chief executive of WorldSkills UK. He discusses how he feels the sixth annual show went, what his highlights were, and what he has learned to take into 2018.

Turning over to page four, you will read about the unusual number of government ministers who descended on the NEC to help tackle what one former skills minister described as "the nightmare on skills street" that Britain currently faces.

You'll also find the inspiring story of Kaiya Swain, who won a gold medal in beauty therapy at last month's WorldSkills competition in Abu Dhabi. She reflects on her experience of the Skills Show, her time in Abu Dhabi and how she uses her experience to drive her business forward.

On page five, our managing director Shane Mann tours the show, meeting employers and apprentices, and finding out why they get involved in the exhibition. There you can also read about the Skills Show's inaugural Youth Summit.

Over on pages six and seven we put inclusive skills competitions into the spotlight, where students with learning difficulties and disabilities show off their employability.

We then celebrate those who made it into Squad UK, and take stock of where we are on the road to WorldSkills Kazan in 2019, with a comment piece from Dr Bentley on the industrial strategy and the role that WorldSkills UK can play in boosting productivity.

Finally we cover a celebration from the final night: the medal ceremony which brought Skills Show 2017 to a close, with reaction from some of the medal-winners. On pages 12 to 15 you can read the full listing of winners.

DEVELOPING AN EDGY AND INSPIRING SHOW

r Neil Bentley, the man in charge of WorldSkills UK, discusses the importance of a strong ministerial presence, how he thought the event went, and what he has learned for next year.

"I personally think this is the best show we have done since I started," admits the man who took over as chief executive in 2015.

"It is because we revamped, refreshed and rejigged the format so it looks different, it is a bit edgier and more contemporary."

The Skills Show introduced two new elements this year: the youth summit - in which young people got the chance to tell FE leaders what they thought good careers advice should look like (page 5) – and a Team UK welcome home event which highlighted "local heroes" who promote skills competitions in their local community.

"We needed this as part of the event to remind everybody that this is real and we are having a positive impact in changing people's lives," he explains. "The feedback has been fantastic and they're something we will continue with in future years."

Thousands of schoolchildren attend the Skills Show every year, providing colleges and training providers with a great platform to get them thinking about their choices in FE, and of course show off all the talented learners competing at the national finals.

Provider engagement has been "brilliant", he says.

"This is sector led activity and honestly if you come here you will see this is the FE sector at its best and I really mean that. More people should come and see we are first class, instead of this whole 'we're not quite good enough' approach. It is colleges and training providers which are really driving this and they should be really proud. It is top notch.

"With the combination of the changes we've made, bringing the competitions to the fore and the VIP ministerial visitors, you get a real sense of momentum around skills."

This year saw one of the biggest casts of top government ministers ever to visit the show.

Support from parliament is "vital", explains Dr Bentley.

"It demonstrates that government gets it. They get the importance of skills and competitions and development

and careers advice.

"Being able to tell the story of Team UK who competed in WorldSkills Abu Dhabi and the talent we have on show here to senior civil servants and ministers is fantastic, because again it showcases the FE sector at its best.

"The fact we had ministers here gives confidence for our sponsors and exhibitors to come back and reinvest in the event for next year. We have created a virtuous circle this year where everybody is feeling more optimistic about the future."

Looking ahead to next year, he wants to focus on bringing more diversity to the fore.

"We have a big diversity issue which we are looking to overcome," he says. "Young women in traditional skills, ethnic minorities, young people with disabilities, LGBT how do we showcase these?

"I'm not quite sure what the answer is today but we're thinking about it and if people have got ideas I'm all ears."

So what were his three fun highlights from 2017?

"The first was Anne Milton having a go at pipe bending, she was really good and it was fantastic because it showed how much she wanted to engage and really get the show,'

"The second was the fantastic army pop band who performed alongside providing the army's careers advice. That really stuck in my mind.

"And third there was a lot more tech in the show this year which has got young people loads more engaged in the future of skills. We should be using this platform to drive the whole industry 4.0 agenda and we're really keen to do that."

THE SKILLS SHOW 2017 www.worldskillsuk.org

GOVERNMENT VIPS FLOCK TO THE SHOW

n A-list cast of ministers and VIPs arrived at this year's Skills Show to help tackle what one MP described as the "nightmare on skills street" that Britain currently faces.

Early visitors to the NEC arena on Thursday got the chance to speak with the skills and apprenticeships minister Anne Milton, the chair of the education select committee Robert Halfon, shadow skills minister Gordon Marsden, and transport secretary Chris Grayling.

Mr Halfon also brought the select committee along with him for the first time ever.

"The Skills Show isn't just an exhibition; it shows the future of where Britain could be," said Mr Halfon, who in his former job was the first skills minister to visit the Skills Show in four years in 2016. "We have 'a nightmare on skills street' in our country, where we are behind many other leading countries in terms of skills.

"The fourth industrial revolution is coming, with robots and artificial intelligence, and we're playing catch-

Robert Halfor

up so we need to put a rocket booster under this."

Ms Milton told FE Week that having over 70,000 people come and watch more than 500 apprentices compete in dozens of disciplines would be "critical" to boosting the profile of skills in this country.

"WorldSkills is the best-kept secret and we need everybody to be aware of it. We have young people here competing for three days.

"Unlike at the Olympics where your event can be over in 10 seconds, these young competing are doing it over a long period of time and doing it at an extremely high standard," she said.

"This is also the big apprentice recruitment drive, and it is a message to employers to shift yourself, start spending that levy, get apprentices in."

She visited Abu Dhabi in October to witness Team UK maintain its top-10 position at the international finals of WorldSkills.

The Skills Show is "as good as" the event in Abu Dhabi,

she insisted, and wished all the young people competing the "best of luck", as their victory could see them visit Russia to compete at WorldSkills Kazan in 2019.

Mr Grayling used his visit to launch his department's 'Year of Engineering', for which the government has pledged to offer a million "direct and inspiring experiences of engineering to young people throughout the vear".

The UK faces an estimated shortfall of 20,000 engineering graduates a year, or more than 180,000 new engineers by 2024.

"If you look at what the skills show is all about, bringing thousands of young people to see engineering in action and to see what they would be doing if they chose engineering as a career, there is no better place to send the message," Mr Grayling told FE Week.

"This is all about talking to the next generation of school, college and university leavers about engineering as a potential profession."

> The ministerial VIPs roamed around the Skills Show and got the chance to speak with various high-profile exhibitors including BAE Systems, Dyson, HS2, Health Education England and colleges including Birmingham Metropolitan College, South Cheshire College and West Cheshire College and South and

City College Birmingham. They even got a chance to have-a-go at some of the activities on offer, such as flying a drone, looking through virtual reality headsets, and meeting robots.

GOOD LUCK SQUAD UK, ENJOY EVERY MINUTE!

Travelling to the Skills Show this year, I admit I felt a little jealous of the competitors preparing to take part in the national finals.

s a former competitor, you are always pleased to hear about the next cohort going forwards to the EuroSkills and WorldSkills competitions but I wish it was my turn again.

Of course, preparing to represent your country on the international stage is not easy. The standards are continually rising at WorldSkills, which is why it plays such an important role in developing world-class standards in skills. As a result, I spent every spare minute I had training for the competition.

I run my own beauty therapy business, Kaiya Rose Beauty, and while it can be blessing because you are your own boss, on the flip-side you have no-one to cover you when you are attending training sessions around the UK. I was very lucky to have clients who supported me on every step of my competition journey. The truth is, when you are training for WorldSkills, very much like training for the Olympics, your social life disappears, and for a young person that can be very hard to accept. However I wouldn't change the experience for anything.

Yes, my name wasn't called out at the medal ceremony as part of Squad UK for EuroSkills Budapest 2018 and WorldSkills Kazan 2019, but I still feel very much part of the WorldSkills UK Team.

I am at the Skills Show representing Team UK and as a judge for VTCT, the competition organising partner for the beauty therapy competitions, I was delighted to be asked back but it is a strange feeling seeing it from the other side. I have found it hard on occasions to stop myself from jumping in and helping the competitors. However it is great to see their determination and passion, and you can see how much winning a medal means to them.

is Grayling enjoying a virtual e

When I was training for WorldSkills, my training manager was Jenna Bailey, who competed at WorldSkills in Montreal in 1999, and I was supported by Rianne Chester (WorldSkills São Paulo 2015). Having the knowledge and expertise of past competitors really helps because no one understands what it is like to compete in unfamiliar country like someone who has experienced it themselves. I want to stay involved to help the next team. wouldn't it be great if we won gold in beauty therapy again?

Competing has fast-tracked my career, it has given me the confidence to know I can run a successful business. But there are so many more benefits to taking part in skills competitions including increased self-confidence, more effective team-working, better time management and the ability to work under pressure. I would urge every college and independent training provider to enter their students and learners into WorldSkills 2018.

Who knows you could have a gold medallist at WorldSkills Shanghai in 2021!

OUR MANN MEETS THE BEST APPRENTICESHIP ADVOCATES

duson

FE Week's publisher Shane Mann toured Birmingham's NEC during his time at this year's show, and met with some of the country's biggest employers to discuss why they get involved

or the thousands of visitors, mostly school children and young adults, attending the Skills Show there were an overwhelming number of opportunities to meet with employers and discuss opportunities.

So on the final day it was my turn to take a tour of this enormous show. I have been attending for six years, and this year felt different, in a good way. The balance between competitions and exhibition was about right.

This isn't any ordinary exhibition. It is an immersive, experiential and inspiring collection of companies, colleges and public-sector organisations, all showcasing learning and employment opportunities.

As someone who is often buried in bad news, my tour served as a useful reminder of the great work our employers and providers are undertaking. It was uplifting to discuss in detail the apprenticeship options available at companies such as BAE, Dyson, Toyota, HS2, Kier, the British Army, Centrica and many more.

The Dyson desk lamp with an RRP of £399 is certainly not the cheapest option on the market. But I now have an understanding of the technology which underpins its (claimed) 40-year life span, thanks to one of its (Dyson Institute of Engineering) engineering degree apprentices, Alex Pilkington.

I met lots of apprentices, but can't recall another so enthusiastic. During his demonstration of how the copper elements keep the light cool we discussed his experience so far of his apprenticeship and of Dyson.

"It's great to be here today and see first-hand the energy and passion people have for apprenticeships," he told me. "I have been an apprentice with Dyson for two months.
I did look at
university,
but an
apprenticeship
was better
suited to my
need. The
opportunity to

learn alongside working is invaluable."

Alex was on the Dyson stand throughout Saturday and will have spoken to hundreds of young people not sure what to do next – and plenty of equally as confused parents. The opportunity to speak with apprentices like him from companies such as Dyson is what makes the Skills Show so inspiring and important.

BAE, a provider with around 1,800 apprentices, had a large presence at the show this year. The moment I saw the have-a-go drone flying activity I was hooked. Sadly, I didn't display nearly enough skills to be selected as a drone pilot.

Before I had a go I spoke with their apprenticeships and skills manager Mark Donnelly. He was amazed and delighted by the amount of interest in apprenticeship options from parents and young people this year.

"It has been fabulous experience, so many people have visited our stand seeking to understand what we do and explore options," he said. "It is important to be here, not only as we seek to achieve our apprentice intake target of 600, but we're also a proud partner of the show and committed to promoting the benefits of STEM and apprenticeships."

While I got to take part in all sorts of wonderful activities, meet many inspiring people and even almost sign up to an apprenticeship, for now I'm going to stick with publishing and save up for my new light. Let's hope

that 40 years from now we're celebrating the impact of 46th Skills Show.

YOUTH SUMMIT TACKLES EVER-PRESENT PROBLEM OF CAREERS ADVICE

he inaugural Youth Summit was one of the standout moments of this year's Skills Show, where learners themselves could be heard on careers.

Five groups of young people were asked to come up with tangible solutions that will make a real difference to careers advice in the UK, and refine them to 120-second pitches.

These were honed and presented to a panel of industry experts including Claudia Harris, the chief executive of the Careers and Enterprise Company, Sue Husband, the director of the National Apprenticeship Service, Trudy Harrison, the MP for Copeland and a member of the education select committee, and Steve Fogg, the managing director of BAE Systems.

When all pitches had been made the panel chose Careers Busters as the winner.

This group focused on the problem of access to careers advice, wanting the government to bring in new legislation to make it compulsory in schools.

"We think businesses with a turnover of £10 million or more a year should bring specialist careers teams into schools and communities to bridge that trust with young people." said Tommy, a team member.

His colleague Atia wants careers mentors introduced

to help disadvantaged people, especially those with disabilities or learning difficulties.

"Some people with disabilities need extra time to explain what they want and are good at," she said. "A mentor would help not only disabled people but someone who is say not so good with English, to get a connection and build trust so they feel more comfortable to sell themselves."

Liam meanwhile wanted to see an app or online service introduced.

"It would make it easier for anybody with disabilities to use an online service," he said. "If someone were deaf, for example, we would have sign language on the service. If they have a disability and feel too embarrassed about talking about what career they want to go

into, the service will make them feel more comfortable for them to speak."

Announcing Careers Busters as the winner, Ms Harrison said: "We chose this team because of their recognition with the problems of accessibility, it is obviously really important to them and that came across really well in their pitch."

INCLUSIVE SKILLS RETUR

SETTING A HIGH BAR

showed off their employability at the Inclusive Skills competition, in one of the new highlights of the show as a whole.

Thirty-nine students from 20 colleges took part in the event, and competed in categories including ICT, woodworking, hairdressing, fitness training, catering, and health and life sciences.

They got here after taking part in regional heats, which were held across the country throughout 2017.

"It has gone even better than we hoped," said Louise Keevil, the inclusive skills manager at Natspec, which organises the competition.

"Seeing the outcome today and having worked with colleagues across the country all year to get to this stage is overwhelming," she said. "I remember being at the Skills Show before inclusive competitions were about and thinking 'hang on, we have a group of people missing here', and now we don't. It is totally amazing."

Inclusive Skills competitions were trialled in 2015 and brought into the mainstream last year, when SEND learners competed in five different skill areas.

They are designed to stretch young people with learning difficulties and disabilities, improving their self-esteem and confidence, and showcase their work skills, showing employers how they can perform under pressure to industry-standard criteria.

"We know that the employment rate for people with learning disabilities is less than six per cent. Employers are missing out on so much talent. At Natspec we are focusing on inclusive skills because it is one way of showcasing all the skills and employability that these young people have," said Clare Howard, chief executive of Natspec.

lestyn Vaughan, from Coleg Sir Gar, chipping away in the carpentry competition

"We have had more competitors and colleges involved this year and the students are performing to a level that stretches them. We're so proud."

Callum Klapatyi, from Hereward College in Coventry, won gold in the ICT category. He admitted that the competition was nerve-wracking but worth it.

"It's made me feel very proud to be here and to be representing my college, but I have also been very nervous because I am representing my college," he

Haydn Thompson, a pathway leader from the College, said: "When you say competition people think win or lose whereas the inclusive skills competition is all about taking part. It's giving them the experience of

competition but with the safety and reassurance that if they don't place first it is still a massive achievement."

Among the guests at the event was Benoit Roger, the international and event manager for the French Abilympics, an international skills competition.

"It's fantastic that Natspec is showcasing professional skills," he said. "It is the best approach for helping young people get into normal work."

Ms Keevil said her "ambition" is to "continue growing the competitions built on stability".

"We're developing some great expertise and it is really important from a sustainability point of view that we get that expertise to make it current, meaningful and long-lasting," she said.

Ben Blackledge, Director of Education and Skills Competitions said: "Working with NATSPEC, I am pleased that we have been able to double the number of inclusive skills competitions at the Show this year, which is an important part of our work."

Join our network of like-minded practitioners

At CACHE, our goal is to help practitioners who are dedicated to caring for others achieve their full career potential.

This is why we are excited to introduce CACHE Alumni; an exclusive professional membership service designed to support CACHE qualified practitioners, specialists and employers in the care and education sectors.

CACHE Alumni for Individuals

CACHE Alumni is packed full of tools and resources to help current and past CACHE learners continue their learning and career development.

CACHE Alumni helps practitioners:

Achieve their potential

Gain access to a variety of professional development opportunities including e-learning, training courses and conferences.

Take the next step

Use our job search feature to find opportunities in their local area which match their skills, experience and career aspirations.

Continue their learning journey

CACHE Alumni's qualification finder helps practitioners identify their ideal next learning and development opportunities.

Stay in the know

CACHE Alumni is packed with tools and resources designed to keep learners and professionals up-to-date with the latest sector news and insight; including guest blogs, policy updates, topical education articles and hints and tips from our specialist sector experts.

CACHE Alumni for Employers

Find, retain and develop highly qualified practitioners in care and education.

CACHE Alumni is designed to equip your employees with the tools and resources needed to achieve their potential and enhance the service they provide to your customers.

CACHE Alumni helps employers:

Find the right people

The service enables employers to target job adverts directly to our cohort of engaged CACHE qualified practitioners. This ensures employers only receive applications from candidates with skill sets that match those required for the role.

Develop their teams

Get discounted rates of up to 25% on hundreds of sector relevant eLearning and CPD courses for their CACHE employees.

Enhance their service

Our latest news section and specialist articles will ensure employees are kept up-to-date with important issues affecting their professional roles. In addition, CACHE Alumni will provide employees with tips and guidance to help them deliver excellence and grow as professionals.

THE SKILLS SHOW 2017 10 www.worldskillsuk.org

'SQUAD UK' PREPARES FOR THE GLOBAL STAGE

early 150 young people have been named in Team UK's official squad for the next step on the WorldSkills trail.

The names of those who will begin training with the aim of representing Team UK at EuroSkills Budapest in 2018 and the 45th WorldSkills in Kazan in 2019 were announced at the closing ceremony of the Skills Show.

The 145 people, including winners from this and

last year's national Skills Show finals, represent more than 80 different FE providers across the UK, including colleges, independent learning providers and employers.

They will now undertake an intensive two-year training and selection process with the hope of earning a place on the world stage.

"This is where the real hard work begins," said Ben

euro**skills** Budapest 2018

SEPTEMBER 2018

EuroSkills in Budapest, Hungary

Team UK will fly to Budapest to compete against Europe's best at EuroSkills between September 26 and 28.

skills competitions.

take over the training and assessment of those competitors. We're now getting in touch with the squad competitors and their providers and employers to tell them what it means to be part of Squad UK."

Blackledge, WorldSkills UK's director of education and

"We at WorldSkills UK and our training managers

The competitors will go through initial assessment and "back-to-basics" training until March 2018 – in which their core skills and mentality will be tested to ensure they have got what it takes to go forward and compete internationally.

From this group, around 20 will be chosen next spring to compete in Budapest at EuroSkills, which takes place between September 26 and 28 that year.

"We'll send our competitors out there to of course compete against the best in Europe but also use it for us as a sort of pressure test and benchmark to see how we are doing and progressing," Mr Blackledge said.

This crop will look to build on the previous medal haul of two golds, one silver, two bronze and eight medallions of excellence that they achieved in EuroSkills 2016 Gothenburg.

After team selection all competitors in the long squad will start intensive training to up their skill levels both from a technical point of view to achieve the right mindsets.

When EuroSkills is over, each squad member will battle it out to make the final team for Kazan in 2019.

The final UK team for the WorldSkills event in Russia will be announced in March 2019, and the competition will take place from August 29 to September 3.

DR NEIL

Chief Executive, WorldSkills UK

THE SKILLS SHOW IS CRUCIAL TO THE INDUSTRIAL STRATEGY

s the Skills Show draws to a close, the publication of the government's industrial strategy is imminent. The idea was welcomed on all sides because of its laser focus on boosting productivity, one of the clearest challenges facing the UK economy.

A recent IPPR report highlighted the scale of the problem and how UK productivity is "world-lagging", trailing the G7 average by 13 per cent and flat-lining for the past decade. Much has been written about solutions to, and I think that WorldSkills UK, through its partnership with leading colleges, training providers, and employers, can contribute in three particular ways.

Firstly, our experience shows that we must invest not just in skills but employee mindset. We have seen firsthand that mindset training can significantly improve productivity outcome. Team UK, which recently won tenth place in the world rankings at WorldSkills in Abu Dhabi, all received mindset training, based on lessons from elite sport. This prepared them for the high pressured challenges of the world's toughest skills competition.

World-beating performances are a combination of

technical skills, physiological well-being and mindset. Working with leading employers including BAE Systems, Toyota and Airbus, all of whom have had apprentices competing at the national finals at the Skills Show, we are planning to bring mindset training to the workplace.

Secondly, world-class performance relies on a relentless focus on standards. The success of Team UK in the past and in the future should help drive the industrial strategy because we need technical education to be underpinned by world-class standards. This will not only help boost employer confidence that training at the highest standard will improve productivity. It will also give young people and parents the confidence that taking up an apprenticeship or technical training will deliver a high-quality career. Embedding the WorldSkills standards across the skills system is our goal.

And finally, as a recent CBI report identified, the take-up of readily available new technologies is also key to boosting productivity. That's why we are introducing new skills competitions into our portfolio in line with industrial strategy needs, including cybersecurity, industrial digitisation, lab technician and green technology. We are seeking new education and industry partners to accelerate the development of these.

The industrial strategy is a huge opportunity for the UK. However, for it to be successful, I believe we need an unwavering focus on mindset and skillset, world-class standards, and new technology. We will be developing and continuing to test all three as we set out on the road to the Skills Show 2018, EuroSkills Budapest 2018 and WorldSkills Kazan 2019.

THE COMPETITORS DO THEMSELVES PROUD

early 200 of the UK's most gifted young tradespeople received medals at the Skills Show's closing ceremony – and a Scottish college was on the podium for the third year in a row.

Winners of 55 different skill areas were rewarded for one of the busiest three days of their lives.

City of Glasgow College came out on top, after finishing second at last year's show and first in 2015, with eight learners claiming medals, with a total of 22 points on the medal table.

In second was Northern Ireland's Southern Regional College with 17 points, followed by Scotland's New College Lanarkshire, which came first last year, in third with 15 points.

The winners were presented with their awards at a special ceremony hosted by TV presenter Will Best.

Holly-Mae Cotterell (pictured right), 18, from Rosson-Wye, who trains at Reds Hair Company, said it was an "absolutely amazing feeling" to win gold in beauty therapy

"I didn't expect it, so I was very shocked to see my name go up on the screen," she said. "I've worked very hard to get this far, staying late after work and basically having no life, but it has paid off so it was all worth it."

Penny Jane Prior, 17, from Blackpool, who studies at West Cheshire College won gold for 3D digital game art.

"It feels absolutely fantastic, I nearly had a heart attack when my name was read out," she said. "I was very comfortable competing in front of so many people, rather than feeling under pressure. Winning gold gives me confidence to pursue a career in gaming."

Sam Yeomans, 18, from Stafford College, was almost lost for words when he was announced as the gold

winner in bricklaying.

"It feels like a relief because I've been working so hard for this," he said after the ceremony. "I work on a building site, so day-in day-out I'm laying bricks and I'm glad it has paid off."

Conor Alexander, 24, from Cumbria, was overwhelmed at his gold medal in welding. He was encouraged to enter the competition again by his tutors at Lakes College Cumbria and his employer Hertel Altrad.

"It is something I have dreamed of and wanted since I was young," said Conor. "My dad is a pipefitter and he encouraged me. I took a shine to welding and was lucky enough to win a silver medal in 2015, so to come back and win gold this year is amazing."

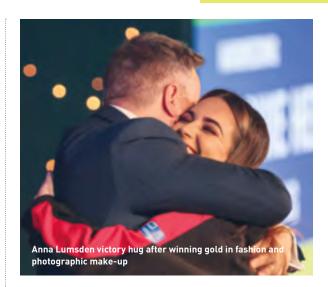

Almost 500 young apprentices and learners competed in disciplines as diverse as aircraft maintenance, 3D game design, cabinet making, plumbing, beauty therapy and cybersecurity – took part in the national finals.

"This has been a wonderful showcase for UK skills," said Dr Neil Bentley, the chief executive of WorldSkills UK.

"The competition was fierce and the standards very high – all the finalists have done brilliantly well just to get this far," he said. "All their hard work and dedication has been rewarded and we at WorldSkills UK salute you."

Skills minister Anne Milton, who attended the event with several ministerial colleagues, said: "You have something amazing – WorldSkills UK is without doubt one of the most important organisations within my portfolio.

"Skills have never been higher on the government agenda."

WORLDSKILLS UK FINALS 2
